Dear,
Hiring Manager, Microsoft,
Kolkata, West Bengal, India

As the Junior Coordinator/Web Developer/ Graphic Designer at REcursion- Official Programming Community of NIT Durgapur, I have proven my responsibilities as a team player, a mentor to freshmen's, an enthusiastic teacher in the field of Competitive Programming, web developer and graphic designer at the same.

According to the job profile mentioned- Microsoft Software Engineering Intern, I see myself as a well-qualified and strong candidate for the position. I have been working on C++ and its Data Structures from past months. Our prior work at REcursion is to give lectures on Competitive Programming and spread the coding culture in our institute and we do it with the help of C++ programming language only.

It is hard to find a team player who is seriously willing to contribute even after selection and I am the candidate who stays on its commitments. I have several times proved myself as a team player in the organisation very well, besides from taking lectures on C++ we have successfully conducted various coding contests named RECode, RECap and Alohomora (An ACM-ICPC styled contest). where we played the role of Problem Setters as well as Testers and hosted on various coding platforms like Hackerrak, CodeChef and Codeforces. Also we play a key role in the annual technical fest-Aarohan where we have conducted various mainstream events like REChase(an online treasure hunt), Mindsweepers, Decathlon and many more.

As a skilled professional in the required field, I would like to present my candidature for the same. I would be delighted to have further opportunity with your company. I am available anytime at your convenience and hope to hear from you soon.

Sincerely,
Prashant Shukla
